

Instructions: The 2:2 module with doors

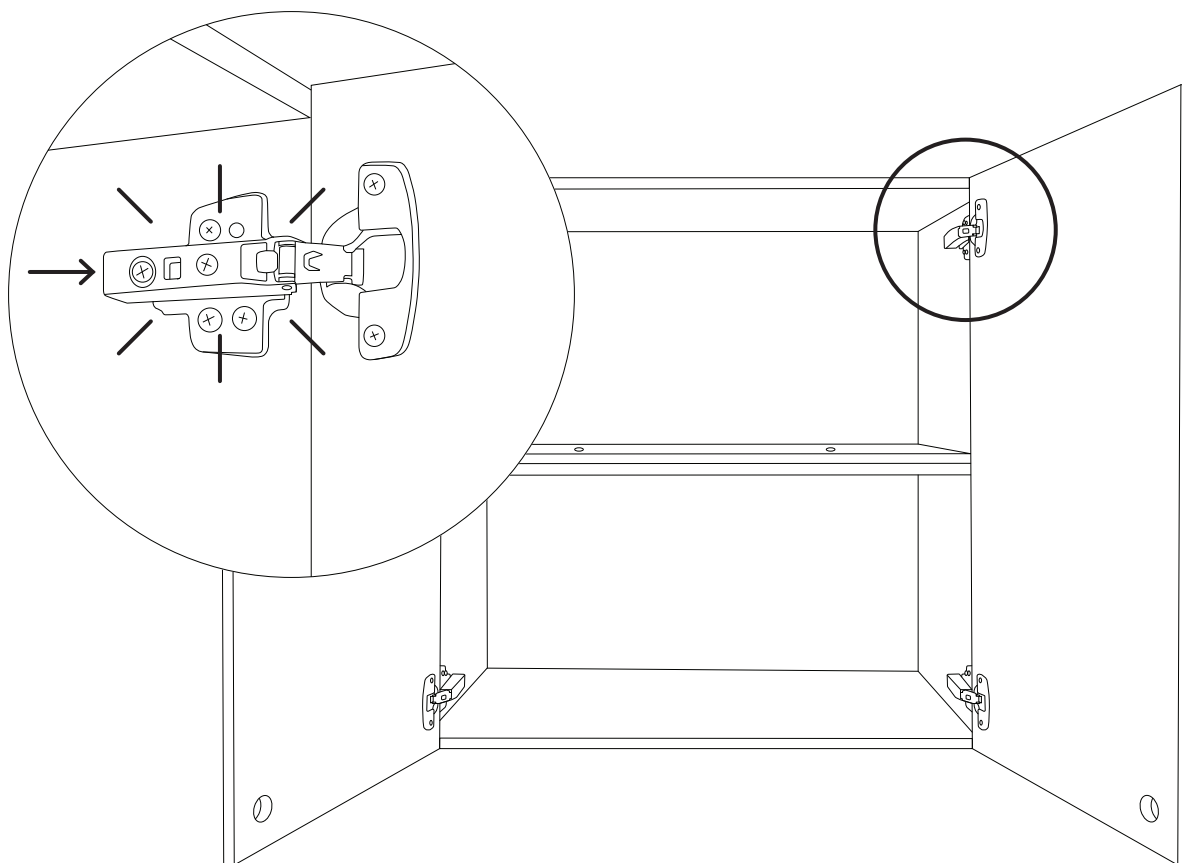

The 2:2 module with doors consists of two 2:1 modules that can be stacked horizontally on top of each other and assembled into a spacious cabinet module in just a few simple steps.

- 1.** Place the two modules on top of each other so that the sides with the two holes face each other in the middle.
- 2.** Insert the supplied pins into the holes.

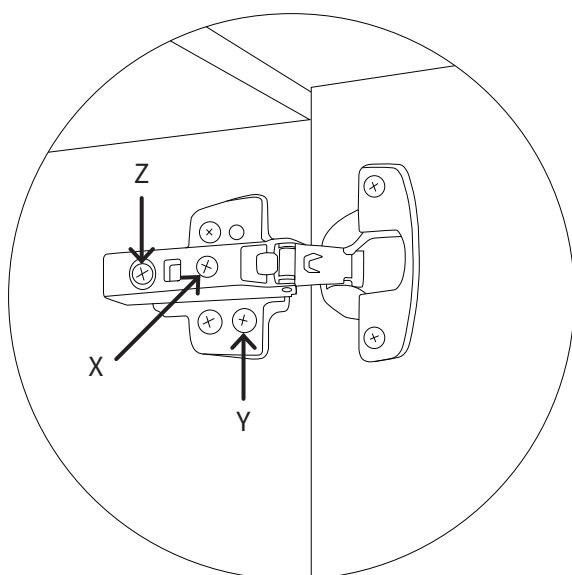

- 3.** Place the overlay hinges (door hinges) into the cut-outs in the doors as shown in the illustration and secure them with the screws.

4.

Latch the doors into the cross plates (counterparts) on the left and right sides of the module interior.

5.

If necessary, use a screwdriver to adjust the doors in the appropriate places so that they are level, and you're done!

Simply use a Phillips head screwdriver to turn the adjustment screws X, Y or Z to the left or right and the door will move accordingly:

- **left/right (X),**
- **up/down (Y),**
- **and front/back (Z)**
