Instructions:
Adjust the anti tip bracket

The included anti tip bracket is designed to ensure optimal wall mounting and prevent your shelf from tipping over. Thanks to the large cutout, it can be adjusted to any height and securely anchor the shelf.

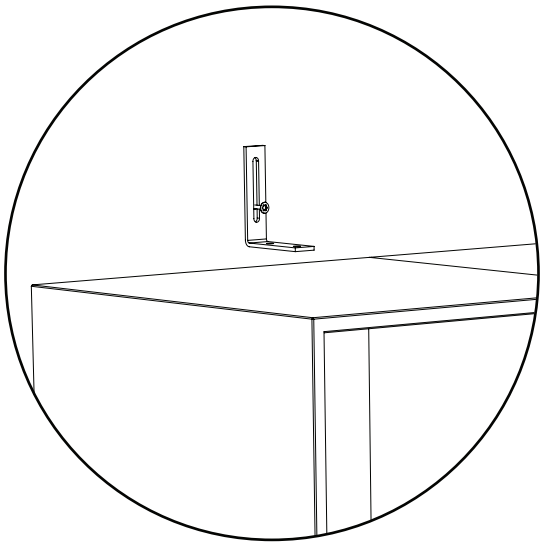

Option 1: Mounting on the top of the shelf

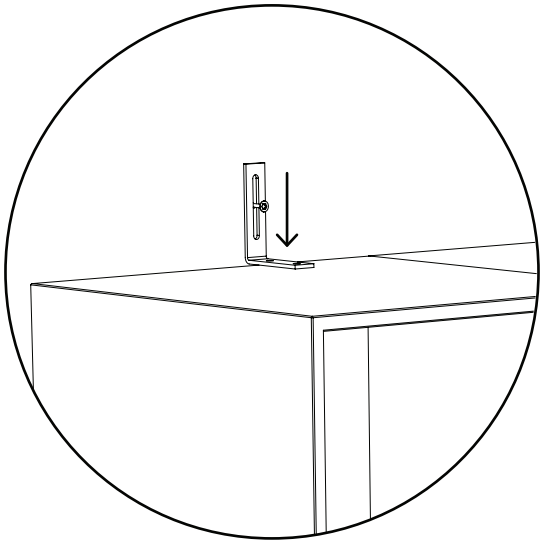

1. Position the anti tip bracket and mark the drill hole

Place the anti tip bracket on top of the upper edge of the shelf. Hold it so that there is still some space below it. Mark the spot for the drill hole on the wall at the very bottom of the large recess.

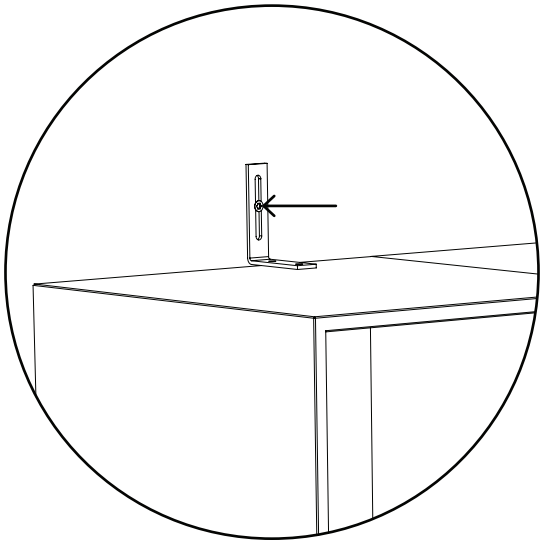

2. Drill the hole and lightly tighten the screw

Drill a hole at the marked spot and insert a suitable anchor. Screw in the screw using the anti tip bracket, but do not tighten it completely yet.

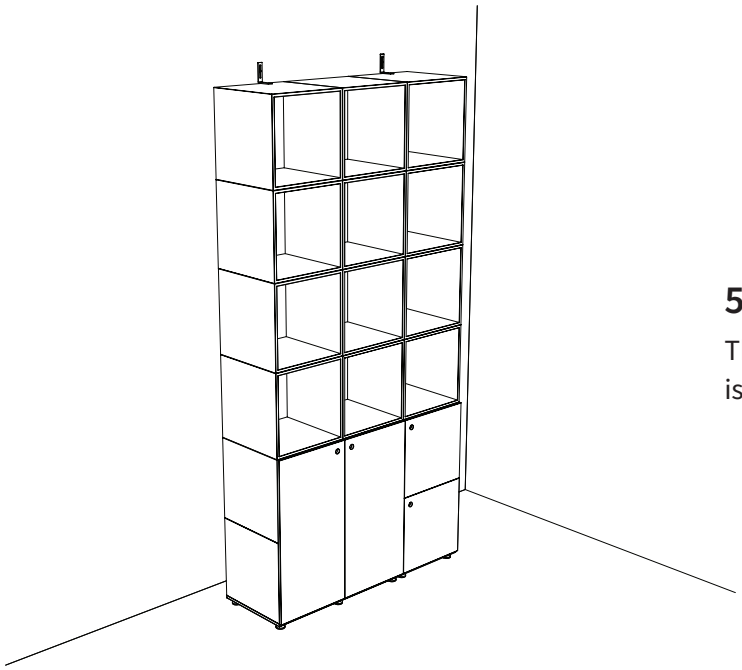

3. Slide the anti tip bracket downward

Now slide the anti tip bracket down as far as it will go. It should lie completely flat on the shelf.

4. Tighten the screw

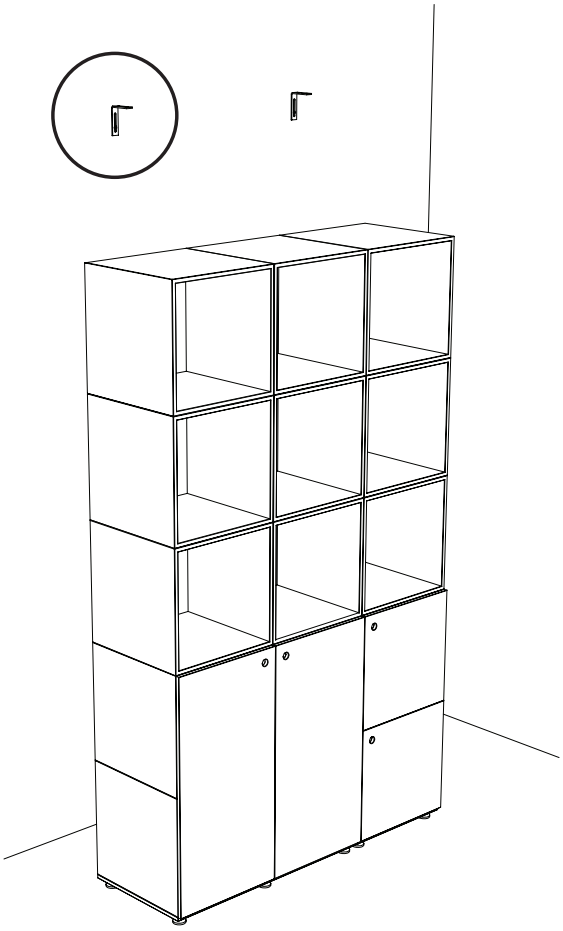

Now tighten the mounting screw all the way.

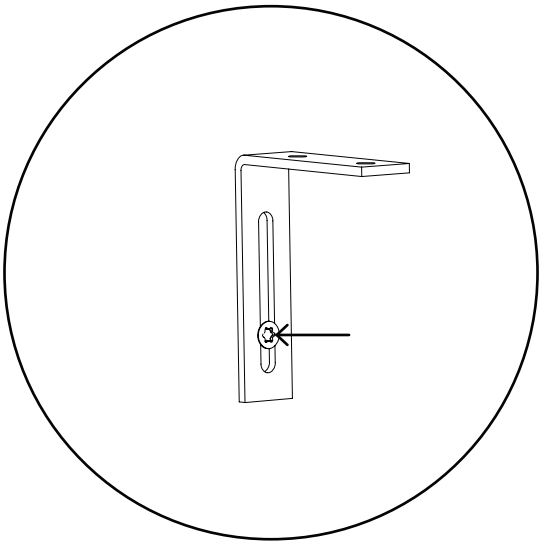

5. Assembly is complete!

The anti tip bracket is securely in place, and the shelf is now protected against tipping over.

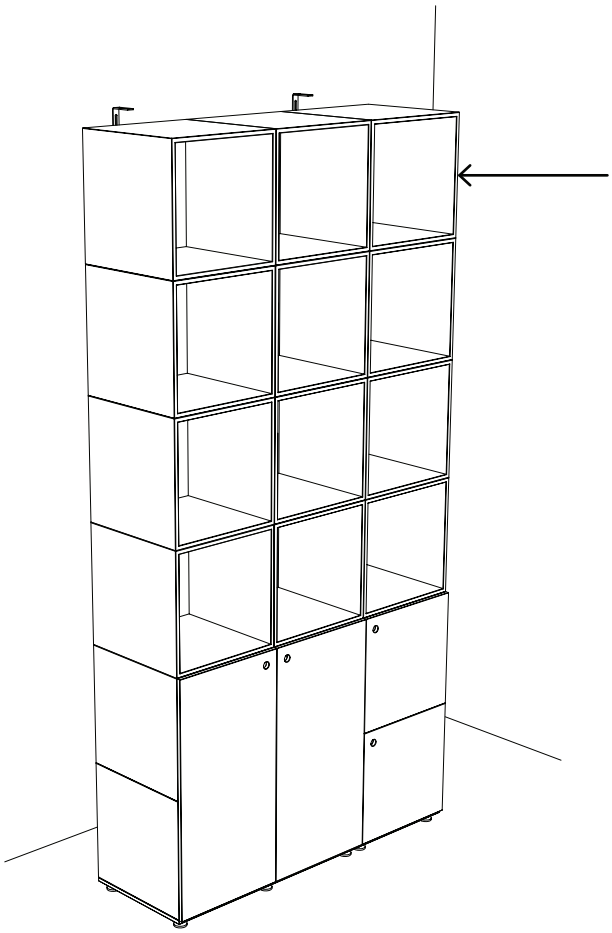

Option 2: Befestigung des Kippwinkels hinter dem Regal

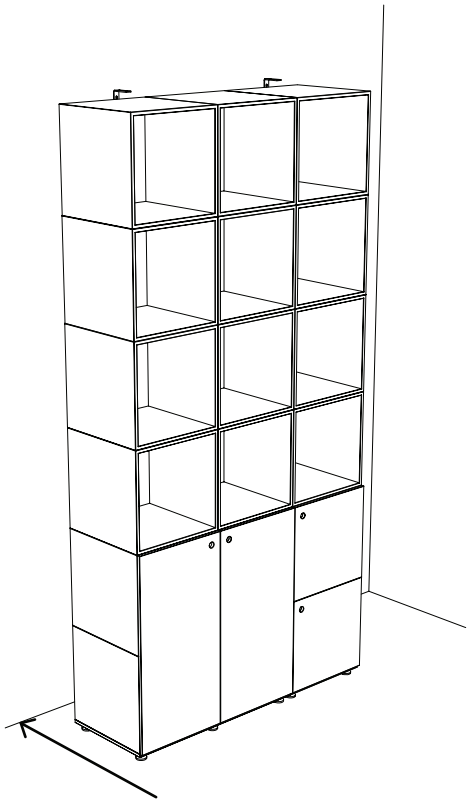

1. Drill a hole and tighten the screw slightly

Assemble the shelf up to the second-to-last row, then measure the height for the tilt angle and secure it at a distance of 2–3 cm.

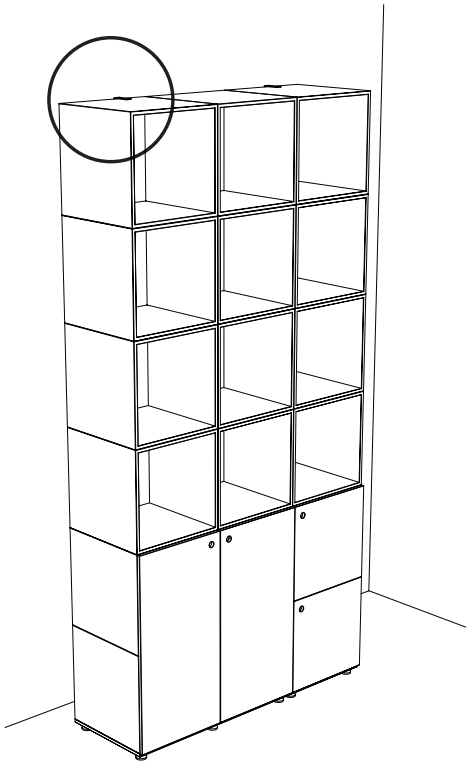

2. Clip the top row in place

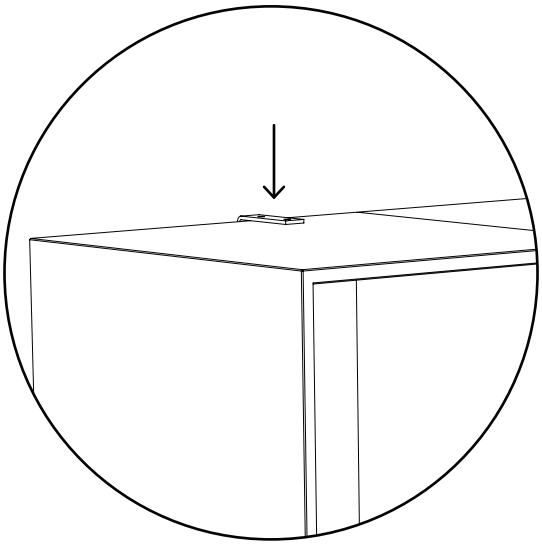

Before moving the shelf to its final position, place the top (last) row of the shelf in position and clip it securely to the elements below so that the shelf is completely stable.

3. Push the shelf against the wall

Carefully push the fully assembled shelf backward so that it is close to the wall and the anti tip bracket – which is already mounted on the wall – is positioned directly above the top edge of the shelf.

4. Slide the bracket down

Since the bracket was mounted with some clearance and wiggle room (due to the large cutout), now slide it down until the horizontal arm of the bracket lies flat and flush against the top of the shelf.

The shelf is now safely secured so it won't tip over!
